Subject. Letter of Recommendation

Apptec engaged the team at Validation Plus to manage the Validation Master Plan for Apptec Laboratories facility at the Philadelphia Navy Business twenty four months ago. Their principal objective was to manage and execute key elements of the Validation Master Plan including the review of Master Batch Records, validate essential equipment in our manufacturing facility (Autoclaves and bioreactors) and assist with other processes with our Apptec staff.

The Validation Plus Senior and Principal Validation Consultants worked exceptionally well with our Apptec team while always remaining flexible to accommodate our needs in completing the projects successfully. The experience of the Senior and Principal consultants was an advantage to Apptec as their suggestions and recommendations were both cost effective and time efficient in completing the Projects at our facility.

I would highly recommend Validation Plus to all biotechnology and life science enterprises as they planned, produced and executed quality protocols and reports that meet our expectations. Their expertise, project management and customer service would be welcomed back for future engagements with Apptec.

Sincerely,

Michael Kenville
Associate Director, Quality Assurance
